USER DATABASE

CUSTOMER IDENTITY: FIRST NAME, LAST NAME, AGE, GENDER.

CONTACT INFORMATION: EMAIL, PHONE NUMBER, ADDRESS, CITY.

SOCIO-DEMOGRAPHICS: FAMILY SITUATION, OCCUPATION, ESTIMATED INCOME.

PREFERENCES: FAVORITE PRODUCT TYPES, PREFERRED BRANDS, PURCHASE CHANNELS
(IN-STORE, ONLINE).

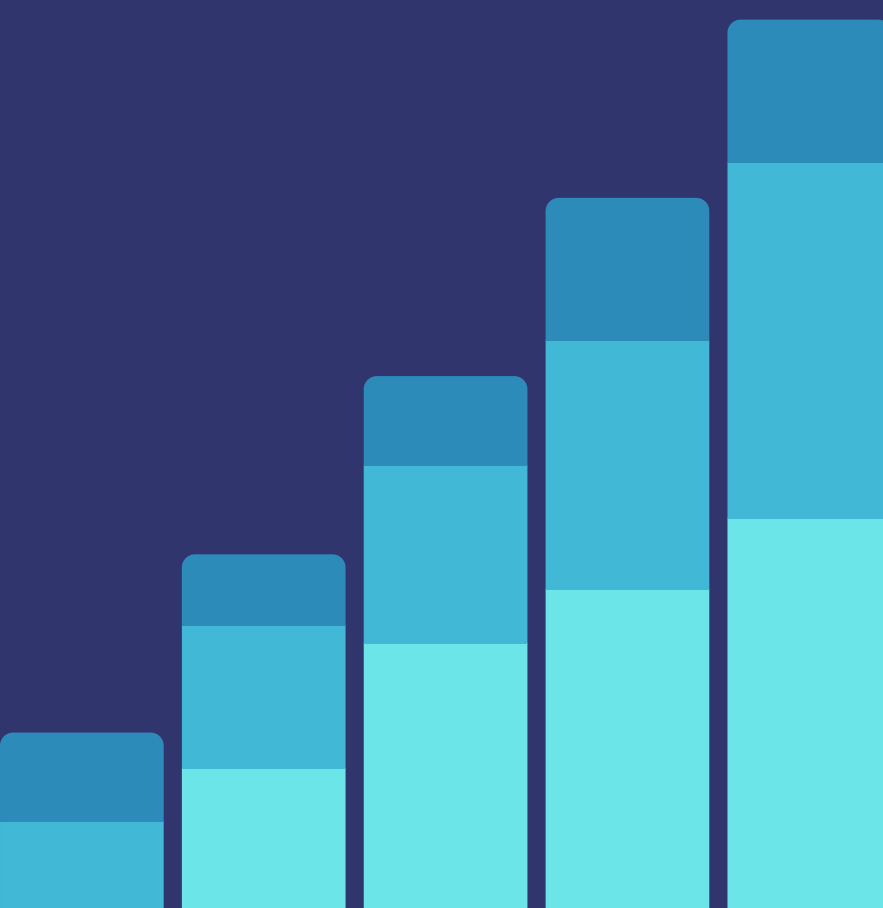

PURCHASE HISTORY: DATE OF EACH PURCHASE, AMOUNT SPENT, PRODUCTS BOUGHT.

PURCHASE FREQUENCY: NUMBER OF VISITS/ORDERS PER MONTH OR YEAR.

PREFERRED COMMUNICATION CHANNEL: EMAIL, SMS, SOCIAL MEDIA.

LOYALTY PROGRAM: POINTS COLLECTED, DISCOUNTS USED, CUSTOMER STATUS (LOYAL, NEW, INACTIVE).

HOW TO USE THE DATABASE

Segmentation: Group customers (big spenders, occasional buyers, young customers, families).

Personalization: Send tailored offers (e.g., birthday discount, promotion on favorite brand).

Behavior Analysis: Identify the most purchased products and adjust the offer.

Sales Forecasting: Anticipate demand based on buying habits.

Loyalty Tracking: Detect customers at risk of leaving and target them with advantages.

Basket & Spending Analysis

For each customer, calculate:

1. Annual Spending = Total amount spent during the year.

Example: $\$50 + \$80 + \$120 = \$250 / \text{year}$

2. Purchase Frequency = Number of purchases per year.

Example: 5 purchases / year

3. Average Basket Size = Total number of items bought $\div$ Number of purchases.

Example: 25 items $\div$ 5 purchases = 5 items per basket

These 3 indicators help calculate the Customer Lifetime Value (CLV).

WHY ARE THEY USEFUL?

Definition of an User Database

“An user database is a structured collection of information about clients that helps a company better understand, analyze, and manage its relationships with them.”

Purpose / Importance

Helps improve customer relationship management (CRM).

Supports decision-making with real data.

Increases loyalty and customer satisfaction.

Boosts sales through targeted marketing.
